

## Summary

### $^{111}\text{InCl}_3$ Uptake in Ununited Fractures: A Case Report

Hitoya OHTA

*Department of Laboratories, Osaka Red Cross Hospital*

$^{111}\text{InCl}_3$  scintigraphy was performed in a 37-year-old male with pancytopenia. Intense tracer uptake in the ununited rib fractures was recognized.

There are few descriptions of  $^{111}\text{InCl}_3$  uptake in ununited fracture, and this case indicated that ununited

fracture should be added to the differential diagnosis of  $^{111}\text{InCl}_3$  uptake.

**Key words:** Scintigraphy,  $^{111}\text{InCl}_3$ , Ununited fracture, Lung cancer, Aplastic anemia.
