

## Summary

### **$^{99m}\text{Tc}$ -MIBI Uptake in Breast Abscess: A Case Report**

Hitoya OHTA

*Department of Laboratories, Osaka Red Cross Hospital*

$^{99m}\text{Tc}$ -MIBI scintimammography was performed in a 24-year-old female with breast abscess. Intense tracer uptake in the breast abscess was noted on both early and delayed images.

There are few descriptions of  $^{99m}\text{Tc}$ -MIBI uptake in

breast abscess, and this case indicated that abscess should be added to the differential diagnosis of breast  $^{99m}\text{Tc}$ -MIBI uptake.

**Key words:** Breast abscess, Scintimammography,  $^{99m}\text{Tc}$ -MIBI.
